## **Non-Spill Quick Disconnect Couplings Enhance Thermal Management Systems**

**St. Paul, MN – March 23, 2011** – Colder Products Company will showcase a broad range of non-spill couplings and solutions for makers of electronic cooling equipment at the SemiTherm Symposium (booth #206). These innovative connectors enable leak-free connection and disconnection of critical fluid lines in liquid cooled servers, chillers and other electronic systems, without the risk of drips or spills.

“Engineers today are constantly seeking more efficient ways to remove heavy thermal loads from dense electronic packaging,” said Dennis Downs, Industrial Business Unit Manager, Colder Products Company. “Non-spill couplings eliminate the disadvantages of a hard plumbed liquid cooling system and are now used to achieve better system flexibility and serviceability without compromising critical safety and reliability requirements.”

Available for tubing ID ranges from 1/8” (3.2mm) to 3/4” (19.0mm) plastic and metal connectors from Colder alleviate concerns inherent in handling fluids in the

(more)

vicinity of critical electronics. They feature color coding for visual line identification, a variety of seal materials for maximum media compatibility and a range of termination and thread types.

Colder Products Company, a world leader in the design and manufacture of quick disconnect couplings, will highlight the Non-Spill Series of couplings and other products for liquid cooling applications at SemiTherm (Booth # 206) in San Jose, March 23-24, 2011.
